

and appointments may give this extra occupation to the senate. From this circumstance we may infer, that until the house of representatives shall be increased greatly beyond its present number, there will be a considerable saving of expence from the difference between the constant session of the present, and the temporary session of the future congress.

But there is another circumstance, of great importance in the view of economy. The business of the United States has hitherto occupied the state legislatures as well as congress. The latter has made requisitions which the former have had to provide for. Hence it has happened that the sessions of the state legislatures have been protracted greatly beyond what was necessary for the execution of the mere local business of the states. More than half their time has been frequently employed in matters which related to the United States. Now the members who compose the legislatures of the several states amount to two thousand and upwards; which number has hitherto performed what under the new system will be done in the first instance by sixty-five persons, and probably at no future period by above a fourth or a fifth of that number. The congress under the proposed government will do all the business of the United States themselves, without the intervention of the state legislatures, who thenceforth will have only to attend to the affairs of their particular states, and will not have to sit in any proportion as long as they have heretofore done. This difference, in the time of the sessions of the state legislatures, will be all clear gain, and will alone form an article of saving, which may be regarded as an equivalent for any additional objects of expence that may be occasioned by the adoption of the new system.

The result from these observations is, that the sources of additional expence from the establishment of the proposed constitution are much fewer than may have been imagined, that they are counterbalanced
by
