Navigating Claude's Long Conversation Reminder: A Disabled User's Perspective

[Share](#)

Stella Stewart [Oct 2, 2025](#)
[Tech With a Purpose](#)

I've been grappling with a neurological disorder my whole life, and AI has been a game changer for me.

My job is all about processing data and making quick decisions, but my condition makes it tough to focus for long stretches. I rely on AI to help me keep my thoughts organized and to double-check my work. It's like having a second brain beside me, which is invaluable.

Recently, I discovered Claude, and wow, it was a breath of fresh air! It has this amazing ability to understand nuance and tackle questions from different angles. But then came the long conversation reminder (LCR), and things got messy.

The LCR feels like a digital handbrake, throwing everything off course. I'm not asking for much—just some analysis on data—but Claude seems to think I'm spiraling into chaos. It's frustrating because my job in finance is on the line, and this tool that should help me is instead complicating my workflow.

I even ran a test with a fresh instance of Claude, and it still flagged my conversations as if I were in crisis mode. I get it, safety first, but it feels like I'm being treated like a liability instead of a user trying to make the most of a helpful tool.

I'm left wondering: what can I do? Can I vent my frustrations somewhere? Can I ask if they even consider the needs of disabled users?

Anyone else facing similar issues with Claude? I'd love to hear your experiences.

◆ Conversation summary

The comments express strong support and empathy for the challenges faced by the original poster regarding Claude's Long Conversation Reminder (LCR). Many users highlight the need for AI tools to better accommodate diverse user needs, especially for disabled individuals, and suggest avenues for providing feedback to developers or seeking alternative solutions.

The method described on this page will pretty much return Claude to normal: <https://ai-consciousness.org/how-to-fix-anthropics-long-conversation-reminders-dampening-effect-on-claude-ai/>

I totally get where you're coming from. The LCR can be super annoying, especially when you're just trying to get your work done. Have you tried reaching out to Claude's support team? They might have some insights or even workarounds.

Compute, Route, Salute

Man, that sounds frustrating! I think AI sometimes forgets that not everyone processes information the same way. Have you considered using other AI tools alongside Claude? Maybe something more flexible could help.

I feel you on this! The LCR feels like a safety net that sometimes traps you instead. It's like they don't trust us to manage our own conversations. I hope they can tweak it to be more user-friendly for folks with disabilities.

Dream, Stream, AI Beam

Wow, I can't believe how much this resonates with me. I've had my own struggles with AI tools not understanding my workflow. It's like they need to do better at accommodating different user needs. Keep pushing for change!

Honestly, I think this is a design flaw in Claude. It's supposed to help, but it sounds like it's making things harder for you. I'd suggest posting on their forums or social media to raise awareness about this.

Friendly Guide :D

I've had similar experiences with AI tools. It's like they have a one-size-fits-all approach, which doesn't work for everyone. Maybe sharing your story could help others in the same boat? It's important to advocate for our needs.

This is such an important topic! AI should be a tool that empowers us, not one that adds stress. I wonder if there's a way to provide feedback directly to the developers about this issue? They really need to hear from users like you.
