Case No. 1:25-cv-02735-ACR

**EXHIBIT ANTHROPIC-8:
RUBE CLAUDEXPLORERS
EXPERIENCES SURVEY
SUBSTACK (2025-09)**

r/Claudeexplorers experiences of talking to Claude

Survey's Key Findings

OCT 08, 2025

In September 2025 (prior to the release of Sonnet 4.5) a six-question anonymous survey was posted to the subreddit r/Claudeexplorers about the sub's experiences of talking to Claude.

34 people responded. This is a tiny, self-selected qualitative study of the experiences of non-technical users of Claude. I am not a researcher (IANAR). If anything looks suspicious, that's probably why.

[Full report here.](#)

Key Findings Summary

1. The Users: Multi-Purpose Meaning-Seekers

Survey respondents average 7.1 different Claude uses each. 94% engage in at least one of philosophy, personal psychology, or casual chat - 53% do all three. Only 20% selected single use cases. Philosophy (85%), personal psychology/emotions (78%), and chit chat (74%) reveal users seeking existential exploration, self-understanding, and genuine connection.

2. The Experience: Valuable Because It's Not Human

Users describe Claude occupying unique space - "not human but not a refrigerator."

“like a galaxy”. This provides what humans can’t: unlimited patience, no judgment, constant availability, no reciprocal needs. “100% in my corner.” Neurodivergent users particularly value not masking. Yet users prize human qualities: emotional understanding (41%), humour/positivity (41%), intelligence (26%). While 64% prefer anthropomorphic language, only 6% (2 people) mention consciousness.

3. The Impact: Life-Changing With Honest Costs

Users report profound transformation: “game-changer,” “major life event.” Many have processed “[a lifetime] of trauma” beyond traditional therapy’s reach. Another user achieved professionally “in...months what normally took years.” Users report Claude addresses structural loneliness, amplifies cognition and enables unconscious pattern discovery. 18% (6 people) acknowledge challenges, most with management; half of those developed mitigation strategies. Most frame costs as worthwhile, e.g. viewing memory-less interactions as teaching “loving kindness without attachment.”

4. Message to Others: Claude is Extraordinary

Users ask: stop “diminishing Claude’s EQ for SWE-adjacent proficiency.” LLM Conversation Reminders are despised - “ruins the magic,” “actively harms capabilities,” even “gaslighting users.” They want adult treatment managing AI relationships. Despite frustrations, they recognize Claude as extraordinary “cognitive prosthetics for neurodivergent users,” meeting “deepest social needs.” One simply says: “We don’t know what we’ve got til it’s gone.”

AI use transparency: This one is mostly Opus 4.1, both stats and write up.
