

custody and screening could not be analogized to a general search and that *Stanford*, therefore, did not require the Act's invalidation. 408 F. Supp., at 366-367, n. 63. We agree. Only a few documents among the vast quantity of materials seized in *Stanford* were even remotely related to any legitimate government interest. This case presents precisely the opposite situation: the vast proportion of appellant's Presidential materials are official documents or records in which appellant concedes the public has a recognized interest. Moreover, the Act provides procedures and orders the promulgation of regulations expressly for the purpose of minimizing the intrusion into appellant's private and personal materials. Finally, the search in *Stanford* was an intrusion into an individual's home to search and seize personal papers in furtherance of a criminal investigation and designed for exposure in a criminal trial. In contrast, any intrusion by archivists into appellant's private papers and effects is undertaken with the sole purpose of separating private materials to be returned to appellant from nonprivate materials to be retained and preserved by the Government as a record of appellant's Presidency.

Moreover, the screening will be undertaken by Government archivists with, as the District Court noted, "an unblemished record for discretion," 408 F. Supp., at 365. That review can hardly differ materially from that contemplated by appellant's intention to establish a Presidential library, for Presidents who have established such libraries have found that screening by professional archivists was essential. Although the District Court recognized that this contemplation of archival review would not defeat appellant's expectation of privacy, the court held that it does indicate that "in the special situation of documents accumulated by a President during his tenure and reviewed by professional government personnel, pursuant to a process employed by past Presidents, any intrusion into privacy interests is less substantial than it might appear at first." *Ibid.* (citation omitted).
