Baselines (delta log cites BOTH): READING_COMPANION_ff81r-83v.md (f. 82v block, ll. 104–133; "As written" ll. 110–119) + ../Immunity

Notes/HLS_MS149_FLOYD_SECOND_ACCOUNT_TRANSCRIPTION.md (§2 f. 82v, ll. 55–66). **The two baselines print VERBATIM-IDENTICAL text for 82v** — one quote block below covers both. Sole presentational difference: the Notes closes "They are ignorant of the Lawe —" with a trailing em-dash before its catchword note; the companion has none (apparatus-of-the-baseline, not a claimed MS reading). Legacy June native crops to reconcile THIS side: crop_H_82v_top_30L_griffith.jpg · crop_I_82v_coke_gravetts.jpg · crop_O_82v_nyne_sixty.jpg · crop_P_82v_averement_tail.jpg (ledger grep 2026-07-09: none separately documented — reconcile by direct read at eB phase; **NOTE: crop_I's filename says "gravetts" — a June label, not evidence; it does not weigh in q-82v-a).**

TOP ITEM — q-82v-a "Granetts" (GEOMETRY BEFORE PARSE · ▲▲ WISH-FULFILMENT GUARD BOTH WAYS · NAMES CLASS): baselines print Granetts[?] — flagged uncertain by the baselines themselves; Notes §4.18 records the **Garnet hypothesis** (referent = Henry Garnet, executed May 1606, prosecuted by Coke personally; "a Restoration copyist's metathesis of 'Garnetts' is the likely path" — *hypothesis, not asserted fact*). **The guard runs BOTH WAYS: the Garnet hypothesis pulls toward seeing "Garnetts"; baseline-conformity pulls toward the printed "Granetts". Neither pull is evidence.** Letterforms first. Adjudicate IN ORDER: (1) initial letter class (majuscule G — cf. atlas Gr-/Gar- row, collecting); (2) the r/ar ORDER after G (metathesis question: Gra- vs Gar- — where does the r sit relative to the a?); (3) the minim cluster before the terminal (e vs u: -ne-/ue- — atlas nn-exemplar "kynne" 81v.24 + e/u row are the comparators); (4) terminal -tts (double-t + s — cf. "pocketts" 82r.6). Also test single-vs-double n (Granetts/Grannetts). **eB regardless of nat confidence + legacy native crop_I reconciliation. Names above all → any variance vs the baselines' printed form = arbitration row, lean-grade disclosed.**

Other 82v q-items (from #19 survey + junction inheritance): 82v.1 catchword completion — expected "That William" (closes 82r's foot catchword That FIRM UNSTRUCK census row) · q-82v-b office token: survey sighted a Chancell^r-class superscript form vs baselines' spelled-out "Chauncellor" (¶9 "Lo: Chauncellor... greate Seale") — adjudicate abbreviation-vs-expansion from strokes; feeds the ARBITRATION #1 comparator family (caption Ch^r 81r.15) · "30^{""} money form (baselines "30li [£30]"; cf. atlas money exemplar "fyned 20.^{""}" 81r.10) · "60 sheets" (arabic digits expected; "fheets" long-^l?) · averem^t abbreviation class ×2 expected (¶8 "noe averement against a Judge after Judg^mt[?]" + ¶9 "Noe averement" — baselines print "averement" expanded, "Judg[men]t" bracket-expanded; watch for m-macron forms) · "Ignoramus" ¶12 (2nd instance after 82r.18) · "Juftice Barkers" possessive expected ¶15 (3rd body office token — ARBITRATION #1 comparator) · "Ch: Lo: Cooke" ¶16 opener (office abbreviation cluster — strokes carefully; cf. Ch^r arbitration) · ¶ census: baselines show 10 ¶s (9 virgule-terminated + final "They are ignorant of the Lawe" running to the catchword) — test whether the all-line-broken-¶s structure (NEW on 82r) holds on the verso · **foot catchword expected: lowercase "that" (→ 83r.1 "that will charge a Judge..."; baselines' note prints it lowercase — verify case + struck/unstruck from strokes).**

Overlap re-sight: .24 ¶{averem}^t. againft the Lo: <Ch>auncell^r ✓✓ — THE SUPERSCRIPT-r HOLDS at 2nd sighting (raised clear of the line + curl). NEW at this grain: a LONG HORIZONTAL STROKE runs through/over "auncell" △△ — DUAL (suspension/abbreviation bar|strike) *an abbreviation bar + superscript-r would make a strongly abbreviated Chauncell^r (vs baselines' plain "Chauncellor"); a strike would be a NEW cancellation — eB-82v-5 adjudicates; the C bowl reads closed/D-like (variant check eB)*.
